Veeva Vault Services

CONEXUS solutions, inc.

## Customer Need

Many small to mid-size, early-stage pharmaceutical companies are stretched thin and struggle with having to manage multiple service providers between their commercial and clinical vaults. It can be difficult to keep up with evolving industry standards and tasks such as the validation of their GxP systems when they are lacking in house resources. In an ideal scenario, they would be given business and technical capabilities in one piece by a provider who is experienced with Vault and industry standards.

Conexus Solutions, Inc. is purpose-built for small to mid-size companies who are in need of a one-stop shop for their commercial and research and development needs. What we do is provide support in all areas so the customer can focus on developing their strategy while we tackle the everyday tactics with a customizable and cost-effective approach. Conexus engages with life sciences organizations in the earliest phases of clinical trials, and our partnership with Veeva and growing list of Veeva Vault certifications ensures that we are equipped to support your journey from clinical development to launch and beyond.

Key Services

- **Veeva Vault Implementations** – As part of the Vault implementation, Conexus conducts requirement gathering sessions, documents business rules, perform configurations, and validates the system as per GxP standards. Our team also provides system user training and performs production deployment.

- **Data Migration** – Our experienced Vault team helps process, clean, and organize clinical data as per industry standards. This service also includes the migration of data between third party systems, such as SharePoint, and Veeva Vault.

- **Third Party Integration** – Conexus has extensive knowledge of business rules and has integrated and managed all the major enterprise applications used by life sciences companies. Our team can develop customized integrations between third party applications and Veeva Vault.

- **Training** – As a certified Veeva Partner, we have a deep understanding of the tools, processes, and business challenges it can address. Our practical experience configuring, implementing, and maintaining these solutions informs our approach and allows us to create training content that goes beyond point-and-click.

- **Validation** – Our teams have extensive experience in handling complex validation services for commercial and clinical implementations such as ongoing application management, data migration, and third-party integrations. We also provide standard GxP documentation including Validation Plan, URS, IQ, OQ, and VSR.

- **Application Management** – Once the implementation process is complete, Conexus provides ongoing application support and management services such as release management, configuration, and end user support.production deployment.
